

# 6-HORSE STRAIGHT LOAD

## GOOSENECK

The class of the industry! That's what we hear from our customers whenever our Straight Load trailers are the subject of conversation. The center load models, also called 'Head to Head', have floor plans that are extremely versatile. The dividers are moveable and removable. With the addition of alternate settings, the dividers can be moved to form box stalls. Our 'Quiet Ride' option reduces interior noise dramatically and makes relocating the dividers as easy as opening a door. Unlike conventional latches comprised of metal pins and receivers that rattle with every bump, the 'Quiet Ride' component system uses spring loaded tapered cones which lock into a funnel shaped keepers. This design does not allow the components to move relative to each other thereby eliminating noise caused by parts rattling.
